The Challenge

While researching the possibility of moving their Lake Mary, FL office to a new intrastate location in Heathrow, FL, ParkerVision realized a move of this complexity would be best handled by a professional commercial relocation provider. In addition to the overall move, the company needed a partner that could plan, provide and install new furniture in its new facility. They also required rebuild, storage and decommissioning solutions for their existing work stations and lab benches in Jacksonville, FL. These high-touch and multi-layered services had to occur within the rapidly approaching deadlines.

Project Goal: Find a strategic partner that could provide turnkey services for relocation and quality furniture solutions within a tight deadline and budget.

The Solution

After ParkerVision contacted Suddath® concerning this project, our team immediately met with their leaderships. After learning the various project goals for this transition, our team went to work organizing floor plans and furniture options to bring to fruition their business vision. Working against the clock, our team of professionals designed a floor plan that maximized the company's usable workspace while minimizing the overall cost. Every expectation the customer set at the beginning of the project was exceeded. Following this successful project, ParkerVision has continued to utilize Suddath for their workplace and furniture needs.

Client Testimonial

"Suddath's designers came up with a design plan that stayed within our budget and allowed us to repurpose relevant pieces while replacing older outdated office furniture. Working with everyone from Suddath including the management, the relocation, design and install teams was the best decision we could have made as they were all professional, experienced, efficient, and dare we say fun to work with."
