savings over competition

The Challenge

The nation's leading transportation supplier wanted to create a modern looking office environment with a heavy emphasis on technology. They needed a furniture solutions provider who could work hand-in-hand with their interior designer to create a contemporary office layout under an aggressive timeline and budget.

Project Goal: In order to minimize business interruption, the project needed to be completed in three separate phases. The goal was to find a strategic partner that could work with their designer and achieve a modern, technology-driven workplace, without breaking the bank.

The Solution

Our ultimate goal is to achieve the customer's vision of their dream office. Working with the designer and client, we put together a contemporary furniture layout and style that modernized their office space. We installed height adjustable workspaces and monitor arms to give the space a clean look with highly functional work stations. Through our experience and collaborative efforts we were able to complete the three-phase install and relocation on time and within a tight budget.

Client Testimonial

"Suddath worked with our designer to come up with a plan that would modernize our space and increase its functionality. Their experience in furniture space planning took this design to the next level. They delivered on their promises, stayed within budget and gave us a space that we love."
